Qattara DEM homework
(due Mon., Nov. 12]

Qattara DEM

Go to the CGIAR site, and download the DEMs that are relevant for the Qattara area of Egypt. Be sure also to download the DEM that contains the Egyptian Mediterranean coast north of Qattara. If you are having a hard time figuring out which tiles to download, go back to Google Earth and figure out the lat/lon range for the area.

Build an attribute table for each, mosaic them together, project your DEMs,, and generate a hillshade for the area. Save everything to your folder on the server.

If you've forgotten how to do all of this, it's in the Primer! I've posted a copy of the Primer on Blackboard, in case you've lost yours!
