

Starting at 30 °F plot isotherms every 10 °F. For each station the temperature is recorded in the upper left. For example, it was 57 °F in Las Vegas at 1500 Z (7AM PST) on March 26 2003. Using different colors color in the space between 30°F and 40 °F, 40 °F and 50 °F, to make your map look like one you'd see in a weather report in USA Today.

Answers from professional plotting routine. 80 F contour line can not be drawn by students with available data
