

## I. How Can I Use All or Parts of this Exercise in my Class?

(based on Project 2061 instructional materials design)

	Part 11.1	Part 11.2	Part 11.3
<b>Title</b> (of each part)	What do we think we know about the History of Antarctica Climate?	What is Antarctica's Geographic and Geologic Context?	Selecting The Best Drillsites for the Science Objectives
<b>How much class time will I need?</b> (per part)	20-40 mins (depends on how much review is needed)	60-120 mins (depends on amount of discussion and extra material used, or 'mini-lectures' given)	20-60 mins (depends on student level and amount of discussion)
<b>Can this be done independently (i.e., as homework)?</b>	Yes. Would need follow-up presentation and discussion in class	Yes. May need in-class preparation. Would need follow-up discussion in class	Yes. Would need follow-up discussion in class
<b>What content will students be introduced to in this exercise?</b>			
<i>Science as human endeavor</i>			
Judgement, decision-making, problem-solving	x	x	x
Science as an evolving process / Nature of Science	x		x
New Research builds on previous research	x	x	x
Unexpected discoveries	x	x	x
Exploratory research vs. focused questions			x
Research enabled by technology (technology change through time)			x

<b><i>Earth History Archives (nature of the sedimentary record)</i></b>			
How do you know about earth history? Types of archives outcrops vs. cores	x	x	x
Where do you go to learn about earth history? Land vs. sea vs. ice	x	x	x
Geographic awareness	x	x	x
Awareness of deep time			
Marine sediments (distribution & controls on distribution)	x	x	x
<b><i>Stratigraphic Principles</i></b>			
Relative dating	x	x	x
Correlation		x	x
Stable isotopes	x		
Subdivisions of geologic time	x	x	x
Unconformities, hiatuses, missing records		x	x
<b><i>Climate Change</i></b>			
Glacial-interglacial cycles	x		x
Climate change can be gradual	x		x
Greenhouse - Icehouse	x		x
Climate change can be abrupt	x		x
Present day rates of change		x	
Regional to global scales of change	x		
Ocean-atmosphere-biosphere-cryosphere system interactions/feedbacks	x	x	
High latitude climate change sensitivity	x	x	
<b>What types of transportable skills will students practice in this exercise?</b>			
Make observations (describe what you see)	x	x	x
Recognize trends (abrupt vs. gradual vs. patterns)	x		x
Plot data – map, graph, pictorial form		x	
Interpret graphs, diagrams, photos, tables	x	x	x
Make hypotheses or predictions	x		
Test a hypothesis	x		

Critical reading & analysis		X	
Synthesize/integrate & draw broad conclusions		X	X
Perform calculations (rates, averages, unit conversions) & develop quantitative skills		X	X
Written communication	X	X	X
Oral communication			
Making persuasive, well supported arguments	X	X	X
Identifying assumptions & ambiguity	X		
Levels & types of uncertainty (quantitative vs. qualitative)	X		X
Significance/evaluation of uncertainties & ambiguity	X		
<b>What general pre-requisite knowledge &amp; skills are required?</b>	None required, but prior exposure to the following topics would be helpful: 1. Use of oxygen isotopes 2. Nature of sediment cores 3. General stratigraphic principles 4. General geologic time scale 5. Simple map and graph reading	1. Basic map-reading skills (incl. geologic maps) 2. Basic knowledge of rock types 3. Basic understanding of geologic time scale 4. Basic math skills	1. Basic map-reading skills 2. Basic understanding of geologic time scale 3. Basic knowledge of what a sed core is 4. Basic math skills
<b>What Anchor Exercises (or Parts of Exercises) should be done prior to this to guide student interpretation &amp; reasoning?</b>	1. Intro to Cores exercises; 2. Cenozoic Overview exercises; 3. Seafloor Sediments exercises	1. None required, but helpful to do Part 1 of this exercise 2. Could provide additional background by doing Intro to cores exercise, Sea floor sediments exercise, & Cenozoic Overview exercise	1. Parts 1 and 2 of this exercise 2. Could provide additional background by doing Intro to cores exercise, Sea floor sediments exercise, & Cenozoic Overview exercise

<p><b>What other resources or materials do I need?</b> (e.g., internet access to show on-line video; access to maps, colored pencils)</p>	<ol style="list-style-type: none"> <li>1. World map or globe</li> <li>2. Geologic time scale</li> <li>3. Document camera or over head projector for discussions</li> <li>4. Online connection for access to additional drillcore information and videos</li> </ol>	<ol style="list-style-type: none"> <li>1. World map or globe</li> <li>2. Geologic time scale</li> <li>3. Internet/projector to show/watch NASA &amp; ANDRILL videos</li> <li>4. Maps / materials for reviewing 'reasons for the seasons' and east vs. west in Antarctica</li> <li>5. Calculators</li> </ol>	<ol style="list-style-type: none"> <li>1. World map or globe</li> <li>2. Map of Antarctica &amp; Ross Sea region</li> <li>3. Internet &amp; projector to show maps/cross sections</li> <li>4. Maps / materials for reviewing 'reasons for the seasons' and east vs. west in Antarctica</li> <li>5. Calculators</li> </ol>
<p><b>What student misconception does this exercise address?</b></p>	<ol style="list-style-type: none"> <li>1. Antarctica is just ice</li> <li>2. There have always been ice sheets in Antarctica</li> <li>3. Volcanic rocks are only found in 'warm' areas</li> <li>4. Because it is far away Antarctica is not relevant</li> <li>5. Generalized data (i.e. global data) tell one about exact conditions at a specific locality</li> <li>6. Sediment cores only tell one about what happened in their immediate vicinity</li> </ol>	<ol style="list-style-type: none"> <li>1. Variability within the cryosphere</li> <li>2. Hemispheric control on seasons</li> <li>3. Antarctica has always been cold</li> <li>4. Polar deserts</li> <li>5. No rocks in Antarctica</li> <li>6. We can infer events when we don't have a direct record of them</li> <li>7. Good datasets are not usually pure luck—the research is carefully planned</li> </ol>	<ol style="list-style-type: none"> <li>1. There is nothing on the seafloor</li> <li>2. The sedimentary record is discontinuous</li> <li>3. Antarctica's climate has changed</li> <li>4. Scientists can always figure out the 'right' answer straight away</li> <li>5. Scientists may 'get lucky' with results sometimes, but most science requires careful planning</li> </ol>
<p><b>What forms of data are used in this?</b> (e.g., graphs, tables, photos, maps)</p>	<p>Graph, map</p>	<p>Videos, maps, tables, cross-sections</p>	<p>Map, stratigraphic summary chart, table, cross section</p>
<p><b>What geographic locations are these datasets from?</b></p>	<p>Global distribution of data</p>	<p>Antarctica (Ross Sea Region)</p>	<p>Antarctica (Ross Sea region)</p>

<p><b>How can I use this exercise to identify my students' prior knowledge (i.e., student misconceptions, commonly held beliefs)?</b></p>	<p>Instructor 'grading' of exercises checks on student understanding of:</p> <ol style="list-style-type: none"> <li>1.Oxygen isotope curve</li> <li>2.Role Antarctica plays in controlling global climate (global conveyor belt)</li> <li>3.How sediment core data is used to interpret past climate</li> </ol>	<p>Instructor 'grading' of exercises checks on student understanding of:</p> <ol style="list-style-type: none"> <li>1.Reasons for the seasons &amp; seasonality in the southern hemisphere</li> <li>2.Latitude &amp; Longitude</li> <li>3.Reading time scales, geologic maps and cross- sections</li> </ol>	<p>Instructor 'grading' of exercises checks on student understanding of:</p> <ol style="list-style-type: none"> <li>1.Map reading skills</li> <li>2.Unconformities</li> <li>3.Stratigraphic summary charts</li> <li>4.What data are needed to support a hypothesis</li> <li>5.Ability to think geologically</li> <li>6. Ability to place detailed study in global context</li> </ol>
<p><b>How can I encourage students to reflect on what they have learned in this exercise? [Formative Assessment]</b></p>	<ol style="list-style-type: none"> <li>1.Ask students: what they found interesting/useful?</li> <li>2.Ask students: what was new?</li> <li>3.Ask students: what questions it makes them want to ask?</li> </ol>		
<p><b>How can I assess student learning after they complete all or part of the exercise? [Summative Assessment]</b></p>	<p>See suggestions in Summative Assessment section below.</p>		
<p><b>Where can I go to for more information on the science in this exercise?</b></p>	<p>See the supplemental materials and reference sections below.</p>		
<p><b>What is the Context for use of these exercises?</b></p>	<p>This could be used as a final review &amp; capstone activity in an introductory geoscience course, or as an introductory review in an upper-level geoscience course.</p> <p>Part 2 could simply be used to introduce students to the cryosphere.</p> <p>Part 1 assumes some awareness of oxygen isotopes – Use the Cenozoic Overview exercises.</p> <p>Part 1 could be a stand-alone exercise.</p> <p>Part 1 could be done after Part 2.</p> <p>Part 3 could be a stand-alone exercise IF students are adequately prepared.</p>
