

## Share your science!

AGU is pleased to announce a new section of AGU's website dedicated to helping our members engage with students, teachers, reporters, the public, and scientists across all disciplines:

Remember what inspired you to get involved in science? Instill that same sense of wonder in others by sharing your research and your science with the broader world. Communicating with general audiences—from students to reporters to policy makers to other scientists—provides you with a perfect opportunity to explain why what you know matters. After all, understandable and exciting science is what encourages federal funding, public support, and new generations of scientists.

AGU is committed to communicating scientific information to the public and highlighting the value of Earth and space science, and we want to help our members convey the importance and excitement of science as well. That's why we've developed a whole new section of our website, "[Sharing Science](#)," where we've collected and created resources and tools to help you reach out to policy-makers, reporters, students, fellow scientists and the general public.

Every action you take helps and makes future actions easier, for you and for others. Please visit these pages and resources often; general audiences need to know why they should care, and you can tell them.
