

Esther Isabelle Wilder  
QR Assessment Results  
Sociology 240: Death, Dying and Bereavement

To refresh everyone's memory, my QR learning goals are as follows:

- (1) **Knowledge and Conceptual Understanding:** I want students to be able to distinguish between an absolute number and a rate, and be able to calculate and express a rate (e.g., as a percentage or in some other analogous forms, such as the number of deaths per 100,000 people).
- (2) **Thinking and Other Skills:** I want students to be able to apply their understanding of the distinction between absolute numbers and rates to make arguments and understand societal trends. For example, I want students to be able to understand that even though China has one of the largest absolute numbers of cremations in the world, the actual rate of cremation is higher in Japan. And ultimately, I want students to be able to apply their knowledge from the course to better understand and explain this distinction.
- (3) **Attitudes, Values, Dispositions and Habits of Mind:** Analyze newspaper articles or statements about absolute numbers and (habitually) define the relative context that allows the numbers to be placed in an appropriate comparative context. (As I mentioned earlier, I want student to internalize the distinction between absolute numbers and rates so that they are constantly questioning data that plays on these distinctions -- but this is not easy to measure. For example, if someone says, "There are more homeless white people than homeless black people in the United States," they can turn around and say, "Well, that may be technically true, but to get a sense of homelessness you really need to look at rates." In short, I would say I want students to demonstrate an appreciation of the applicability and importance of the distinction between absolute numbers and rates, and to feel comfortable with their ability to apply it in everyday life.)

My QR assessment, attached to this document, included both a pre-test as well as a post-test. Altogether, I had 17 students (out of 25) complete both the pretest as well as the posttest in my Sociology 240 course in the Fall of 2013 (of course, some students were absent the day I administered the assessment). I have also attached the results from these students (i.e., frequencies and data analysis)!<sup>1</sup> I am still planning to do more detailed statistical analyses (e.g., examining variation in students' performance by variables such as transfer status, primary language, etc.), but for now these data provide some interesting results.

Overall, the results showed that students did significantly better on the posttest vs. the pretest. The most notable finding was a significant improvement in students' ability to set up an equation/calculation for a death rate. Only 18% of students got that correct on the pretest,

whereas 50% received all or partial credit on the posttest. Although the other individual questions did not yield statistically significant findings, each of them was also associated with an improvement in student performance and collectively the mean scores on the pretest and posttest were 2.09 and 3.47 respectively. (As illustrated in my scoring rubric, students can score up to 7 points on this assessment instrument.) While these scores may seem low, the change in performance represents a 66% increase in students' average scores. But of course, there is also room for improvement.

In spite of the assignment, and other associated instructional activities, students continue to have many problems with interpreting rates and understanding what can (or cannot) be interpreted from absolute numbers vs. rates. These are areas that will need continued attention in my future teaching and I plan to spend more time having students doing hands-on activities that will help them to develop these skills. In short, they have done a much better job with the mechanics of quantitative reasoning operations, but they continue to have a lot of difficulty with interpreting quantitative information (a higher-level skill).

The assessment instrument also had some questions about students' attitudes towards QR and mathematics. Overall, these results did not yield significant results, though ideally we would like to see students expressing more appreciation for the importance of these and other QR skills for their everyday lives.

I certainly will be undertaking QR assessment in my courses in the future, as I believe assessing student learning is critical to understanding whether or not I am succeeding in achieving my QR learning goals. I may also devise some simpler instruments that are easier to score, but I think this one gets at some important QR skills in a way that really assesses the 'reasoning' aspect of quantitative reasoning!

Note:

1. I used McNemar's test and the Wilcoxon signed-rank test to assess statistical significance. McNemar's test is appropriate for nominal data and is applied to a  $2 \times 2$  contingency tables with a dichotomous trait (e.g., correct vs. incorrect), with matched pairs of subjects. The Wilcoxon signed-rank test is the appropriate non-parametric test for comparing repeated measurements on a single sample to assess whether the mean ranks of two populations differ.) I am especially grateful to Rebecca West who carried out the statistical analysis of the data.

## **Quantitative Reasoning/Quantitative Literacy Assessment Instrument**

**Directions:** The Quantitative Literacy (QL)/Quantitative Reasoning (QR) Project at the City University of New York (CUNY) is currently in the process of implementing new teaching strategies to strengthen students' quantitative reasoning skills. As part of this effort, we are trying to measure students' attitudes and QL/QR skills. The questions in this assessment instrument are part of this effort. This exercise will not be used in grading your performance in this class and you may refuse participation or skip any questions that you do not wish to answer. At the same time, we ask that you please try your best to respond to all the questions since your responses are very important to this research and will be treated with great respect and confidentiality. Thank you very much for your participation in this exercise!

*Quantitative Reasoning or Quantitative Literacy may be thought of as “a ‘habit of mind,’ competency, and comfort in working with numerical data. Individuals with strong QL skills possess the ability to reason and solve quantitative problems from a wide array of authentic contexts and everyday life situations. They understand and can create sophisticated arguments supported by quantitative evidence, and they can clearly communicate those arguments in a variety of formats (using words, tables, graphs, mathematical equations, etc., as appropriate)” (Association of American Colleges and Universities 2010).*

| i. I rarely encounter situations that require mathematical or quantitative skills outside of school.                        | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| j. I am nervous about learning mathematics and quantitative skills.   | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| k. Strong mathematics and quantitative skills help students to do well in other classes.                                    | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| l. There is nothing creative about mathematics or statistics; it’s just about memorizing facts, rules and formulas.         | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| m. Writing about mathematics and statistics makes it easier to learn.   | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| n. Mathematics and quantitative skills are important in everyday life.  | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| o. Mathematics and quantitative analysis are solitary activities, done by people in isolation.                              | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| p. For me, mathematics and quantitative analysis rarely involve exploration, investigation or experimentation.              | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| q. Working in groups helps me learn mathematics and quantitative skills.  | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| r. I have had sufficient coursework in mathematics and quantitative reasoning to enable me to succeed in my career goals.   | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| s. I have had sufficient coursework in mathematics and quantitative reasoning to enable me to succeed in my personal goals. | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |
| t. I have the mathematical and quantitative skills needed to critically evaluate the media and current events.              | <input type="radio"/><br>1 | <input type="radio"/><br>2 | <input type="radio"/><br>3 | <input type="radio"/><br>4 | <input type="radio"/><br>5 | <input type="radio"/><br>DK or N/A    |

Note: Some of these questions have been adapted from the Dartmouth Mathematics Across the Curriculum Survey.

## Quantitative Reasoning (Pretest) Assessment Instrument

**Instructions:** This assessment instrument is designed to evaluate your ability to interpret quantitative data, including numbers and rates. This assignment will NOT be graded but you are required to hand it in. Please try your best!

Based on the data in Table 1 (attached page), please answer the following 2 questions.

(1) Based on Table 1, please show how the traffic accident fatality rate was calculated for any single year (please set up the equation/calculation).

(2) Based on the data in Table 1, in what year were people most likely to die from traffic accident fatalities? What year were they least likely to die? Please both (a) identify the numbers that support your answer and (b) interpret the data (explain the numbers) to support your answer.

(3) A newspaper article that is reporting on regional differences in accident fatalities notes the following:

Of all US states, Texas contributed the largest share of traffic accident fatalities in 2011.

Based on this statement, would you feel confident arguing that people in Texas were more likely to die from traffic accident fatalities compared to individuals in other states in 2011? Why or why not?

Table 1  
Traffic Accident Fatalities in the United States, 2001 to 2010

| Year | Accident Fatalities | Rate per 100,000 | Population (approx.) |
|------|---------------------|------------------|----------------------|
| 2001 | 42,196              | 14.8             | 284,969,000          |
| 2002 | 43,005              | 15.0             | 287,625,000          |
| 2003 | 42,884              | 14.8             | 290,108,000          |
| 2004 | 42,836              | 14.6             | 292,805,000          |
| 2005 | 43,510              | 14.7             | 295,517,000          |
| 2006 | 42,708              | 14.3             | 298,380,000          |
| 2007 | 41,259              | 13.7             | 301,231,000          |
| 2008 | 37,423              | 12.3             | 304,094,000          |
| 2009 | 33,883              | 11.1             | 306,772,000          |
| 2010 | 32,885              | 10.7             | 309,350,000          |

### **Quantitative Reasoning (Posttest) Assessment Instrument**

Instructions: This assessment instrument is designed to evaluate your ability to interpret quantitative data, including numbers and rates. This assignment will NOT be graded but you are required to hand it in. Please try your best!

Drawing on the data in Table 1 (attached page), please answer the following 2 questions.

- (1) Based on Table 1, please show how the suicide rate was calculated among any single racial/ethnic group of your choice (please set up the equation/calculation).
  
  
  
  
  
  
  
  
  
  
- (2) Among adults ages 35-64, what ethnic/racial group exhibited the highest and what ethnic/racial group exhibited the lowest likelihood of committing suicide in 2011? Please both (a) identify the numbers that support your answer and (b) interpret the data (explain the numbers) to support your answer.

- (3) A newspaper article that is reporting on regional differences in suicide notes the following:

In comparing US regions (Northeast, Midwest, South, and West), the data show that the South contributed the highest proportion of suicides in 2011.

Based on this statement, would you feel confident arguing that people in the south were more likely to commit suicide than those in other regions of the US in 2011? Why or why not?

Table 1  
Suicide among Adults Ages 35-64 in the United States, 2011

| Race/Ethnicity                 | Suicides, 2011 | Suicide Rate (per 100,000) | Population, 2011 |
|--------------------------------|----------------|----------------------------|------------------|
| White                          | 18,848         | 22.3                       | 84,520,179       |
| Black                          | 970            | 6.8                        | 14,264,706       |
| Hispanic                       | 1,180          | 7.4                        | 15,945,946       |
| Asian/Pacific Islander         | 509            | 7.8                        | 6,525,641        |
| American Indian/Alaskan Native | 171            | 18.5                       | 924,324          |

## SCORING RUBRIC

### Scoring Rubric for Question #1

(a) Did the student correctly set up the numerator/denominator correctly?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

(b) Did the student correctly multiple by 100,000?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

TOTAL (up to 2 points) \_\_\_\_\_

### Scoring Rubric for Question #2

(a) Did the student correctly identify the highest rate and lower rate?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

(b) Did the student correctly refer to the appropriate numbers?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

(c) Did the student correctly interpret the rate?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

TOTAL (up to 3 points) \_\_\_\_\_

### Scoring Rubric for Question #3

(a) Did the student correctly indicate that s/he could not reach the conclusion based on the data?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

(b) Did the student correctly indicate they would need a rate (however stated) in order to make this conclusion?

|           |          |
|-----------|----------|
| No.       | Yes.     |
| 0 points. | 1 point. |

TOTAL (up to 2 points) \_\_\_\_\_

**TOTAL POINTS** (up to 7 points total) \_\_\_\_\_
