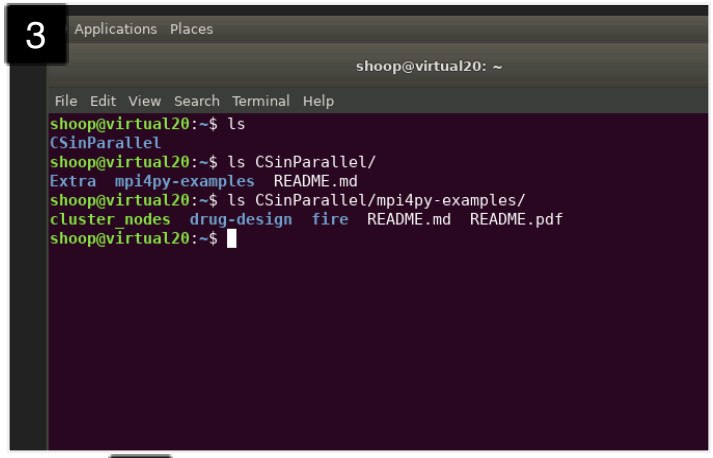
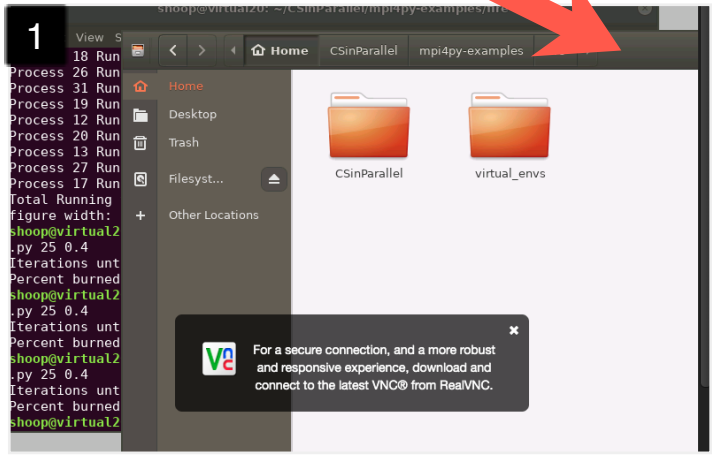
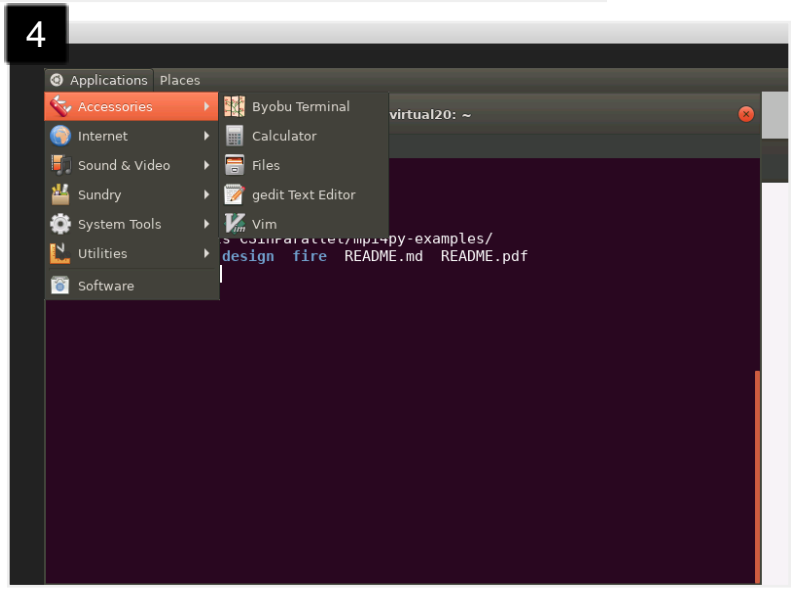
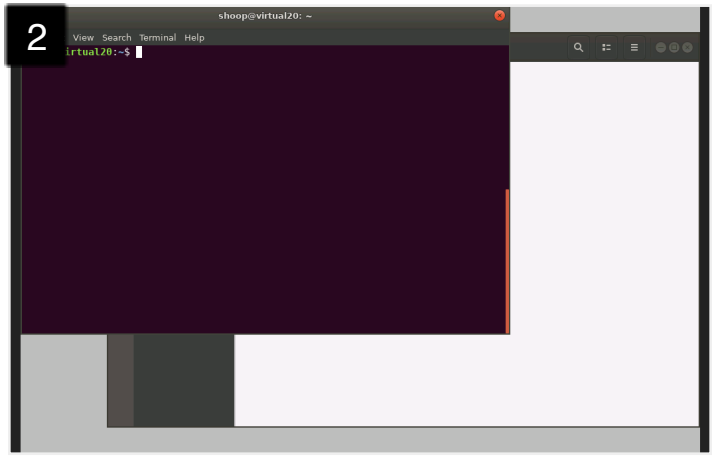
Using VNC Viewer once connected

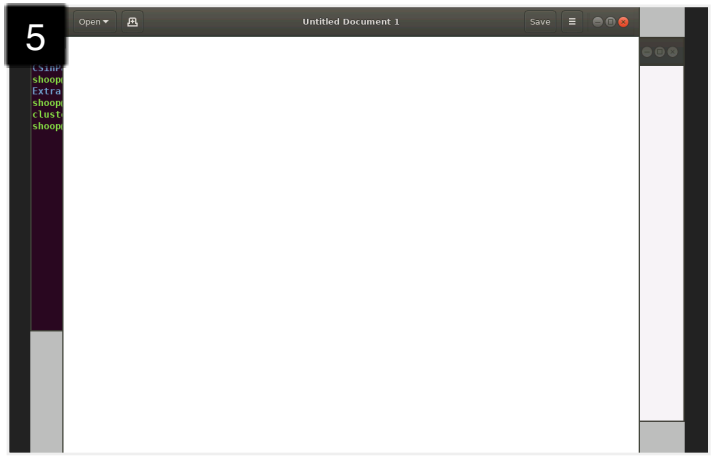
Drag this file browser window down and to the right to show the terminal behind it on the desktop











1. Close the warning box- we use unencrypted for free. Resize the viewer window. Drag the file browser to reveal a terminal.
2. Click on the terminal window with the purple background to bring it forward.
3. The commands shown in this step show you the code directories on your account under the CSinParallel directory.
   `ls CSinParallel/`
   `mpi4py-examples`
4. Here is how you get to the text editor, which is one way you can view the code files. Choose gEdit text editor
5. The editor comes up blank, use the Open menu in the upper left when you want to go find the files.
