Part 2. Planning Meeting – Are we in a drought or at risk of floods?

1. How does precipitation in the last month and for the water year compare to average for the upper Colorado River basin above Grand Junction? For whole upper Colorado River Basin?
2. How does the current snowpack compare to average for the upper Colorado River basin?
3. How does the current soil moisture compare to average for the Upper Colorado River basin?
4. How have recent temperatures compared to average?
5. How full are critical reservoirs? Which reservoirs are of greatest concern?
6. Discuss the current and recent streamflow situation.
7. Discuss whether or not Grand Junction should begin planning for drought (water shortages) or possible flooding.
