Aquaculture

PART A: Aquaculture Around the World

1: In 2004, global aquaculture production totaled 59.4 million tons. What percentage of this production was freshwater fish? How does this compare to the percentage of U.S. aquaculture accounted for by freshwater fish (channel catfish, rainbow trout, and American yellow perch) in 2005?

2: What was the global value of crustaceans in U.S. dollars per ton in 2004?

3: What was the total value in billions of dollars, of world aquaculture production in 2004?

PART B: Trends in Aquaculture

1: How does aquaculture impact the environment and wild fish populations?
