

Write a ½-page response to each of the following:

1. What is the difference between human response to short- vs. long-term climate change?
2. On what does the ability of a society to adapt to climate change depend?
3. What factors affect the climate of any particular place?
4. What are feedback loops? What is the difference between positive and negative feedbacks?
5. Give examples of human societies have been impacted by climate variability, short-term climate change, and long-term climate change. Explain how each example fulfills your designations.
