Classroom Management Strategies

Management challenges in large classes:

- Student who wants to talk individually with the instructor at the beginning of class
- Openly disruptive, rude student
- Field trip logistics
- Forgetting required equipment
- Asking for help beyond your expertise (personal problems)
- Inappropriate use of email (no salutation, etc.)
- Academic dishonesty
- Managing group work (including moving around or interactivity)
- Mental health issues
- Disability access and accommodations
Classroom Management Strategies

Management challenges in large classes:

- Late arrival, early departure
- Sleeping, reading the paper, ...
- Poor attendance
- Talking, cell phone (esp. texting), laptops
- Who’s actually there? Who’s taking the exams?
- Grading
- Dealing with missed assignments, exams, ...
- How much email?
- Student who wants to talk individually with the instructor at the beginning of class
- Openly disruptive, rude student
- Field trip logistics
- Forgetting required equipment
- Asking for help beyond your expertise (personal problems)
- Inappropriate use of email (no salutation, etc.)
- Academic dishonesty
- Managing group work (including moving around or interactivity)
- Mental health issues
- Disability access and accommodations
Classroom Strategies, Con’t

Strategies:

• The syllabus is your friend (and a “contract”)
• Be explicit about behavioral expectations
• Dropping lowest grades reduces need for make-ups
• Consider having students read and sign the syllabus
• Cell Phone policy (I answer theirs, they answer mine); leave classroom if caught texting
• Computer use agreement (consider separate seating area)
Classroom Strategies, Con’t

Strategies:

• Use Classroom Management System if you have it (Blackboard, D2L, …)
  • Assignments, handouts, syllabus
  • Can have due dates that fit student’s schedule (midnight 😊)
  • Often system can check for plagiarism
  • Sometimes can auto-grade
  • Assessment
  • Reading quizzes required prior to class
  • Podcasts and peer assessment of oral presentations
  • Post videos of lectures
  • Agreements
Classroom Strategies, Con’t

Strategies:

• **Personalize** the student experience
  • Learn student names, or more than just the few who always answer questions
  • Consider using a seating chart … I was very skeptical but am a complete believer now.
  • Can separate friends, athletes, Greek Life, etc.
  • Helps build study groups
  • Relatively easy to implement (Excel)
  • Late arrivers must sit in own seat
Classroom Strategies, Con’t

Strategies:

• Disruptive behavior
  
  • Set a positive classroom environment from the 1\textsuperscript{st} day.
  • Engaged students are less disruptive.
  • Be explicit about expectations (some “disruptive” behavior worse than other ... I don’t mind sleepers 😊)
  • Avoid escalating situations if possible. Ask to see the student after class.
  • Seating chart reduces disruptive behavior

• If you feel at risk of harm, call 911
Classroom Strategies, Con’t

Strategies:

• Email
  • Have clear guidelines (e.g., “Subject line must include class name”; require appropriate language, ...)  
  • Consider a policy for response time ... if you respond right away, can increase expectation of ‘instant’ response. Maybe 24 hours?  
  • If you get same question several times, consider broadcast email to entire class.  
  • Refer students to syllabus! (I won’t answer the question, “Hey Prof, when is the final exam?” 😊)
Classroom Management Strategies

We’ve looked at:

- Syllabus as a resource
- Classroom management systems (blackboard, etc.)
- Personalize the experience (knowing names, using a seating chart)
- Disruptive behavior
- Email

What other issues/strategies:

- Formal mid-course evaluation (from students, about teaching): what’s working well, what would you change? (don’t have to wait until midterm; can have a colleague collect students’ feedback for you)
- Balancing the personalized experience with the challenges of large numbers (treating students like adults while still managing the logistical issues)
