

## Pedagogical Content Knowledge Institutional Landscape Analysis

### GOAL ONE: CRITICAL IDEAS INVENTORY

Because pedagogical content knowledge (PCK) is **topic-specific**, a first step is to identify which critical ideas of the discipline are addressed within the Teacher Educator Programs (TEP). Known as the “Disciplinary Core Ideas” in the NGSS and “Content Domains” in CCSSM, these are the critical ideas that teacher candidates will be responsible for teaching. Identifying the extent to which the curriculum TE candidates experience in a program helps prepare the teacher candidates to address these critical ideas is an important consideration for preparing the *Next Generation* of STEM teachers. The purpose of this analysis is to help TEPs assess the extent to which they are preparing teachers in relation to the disciplinary content knowledge.

Table 1. Inventory of Critical Ideas Addressed in the TEP

Science Critical Ideas	Courses/Experiences in which PSTs are exposed to these critical ideas
<p><b>Example:</b>                      LS2: Ecosystems: Interactions, Energy, and Dynamics                      LS2.B: Cycles of Matter and Energy Transfer in Ecosystems</p> <ul style="list-style-type: none"> <li>● Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment, and release waste matter (gas, liquid, or solid) back into the environment.</li> </ul>	<p><b>Example:</b>                      SCED 203 Matter &amp; Energy in Life Systems</p> <ul style="list-style-type: none"> <li>● Students learn about conservation of energy....</li> </ul> <hr/> <p>SCED 480 - Science Methods and Curriculum for the Elementary School</p> <ul style="list-style-type: none"> <li>● Students participate in a model lesson about the water cycle</li> <li>● Students develop and teach a unit on life cycles for 3rd grade (not all students)</li> </ul>

*\*repeat additional rows as needed*

**Questions for Consideration:**

- How do you assess prior knowledge from goal 1 for graduate teacher candidates?
- To what extent do students' experiences **across their coursework** provide opportunities to develop knowledge of each of the critical ideas they will be expected to teach students?
- Are there particular critical ideas that are emphasized to a greater or lesser extent?
- Are there particular critical ideas that are *not addressed* but should be?
- What course(s) and experiences emphasize the critical ideas? Are there other courses and experiences that are not listed, but that should be?
- What technological tools are integrated in the teaching of science and mathematics content coursework?
- What components of engineering are integrated in teaching of science and mathematics coursework (as outlined by the Engineering Working Group)?
- Are the approved curricula student-centered, using a lens for cultural responsiveness (as consistent with [Framework for K-12 Science Education](#) and [NCTM Equity Principle](#))?
- What is *cultural responsiveness*? (define in footnotes)

<b>Scoring Rubric for Goal 1:</b>	<b>Beginning</b>	<b>Developing</b>	<b>Integrating</b>
The curriculum of the teacher education program (TEP) addresses the disciplinary core ideas (critical ideas) that teacher candidates will be	The TEP addresses some of the critical ideas. Some courses and experiences do not address the critical ideas	The TEP addresses most of the critical ideas in a robust manner across multiple course contexts.	The TEP addresses each of the critical ideas in depth across multiple courses contexts and experiences.

expected to teach.	fully.		
The curriculum of the teacher education program (TEP) addresses the cultural responsiveness that teacher candidates will be expected to teach.	The TEP addresses some cultural responsiveness. Some courses and experiences do not address cultural responsiveness fully.	The TEP addresses most cultural responsiveness in a robust manner across multiple course contexts.	The TEP addresses each cultural responsiveness in depth across multiple courses contexts and experiences.
The curriculum of the teacher education program (TEP) addresses explicit engineering ideas that teacher candidates will be expected to teach.	The TEP addresses some of the engineering ideas. Some courses and experiences do not address the engineering ideas fully.	The TEP addresses most of the engineering ideas in a robust manner across multiple course contexts.	The TEP addresses each of the engineering ideas in depth across multiple courses contexts and experiences.
The curriculum of the teacher education program (TEP) addresses the technological tools for teaching that teacher candidates will be expected to teach.	The TEP addresses some of the technological tools for teaching. Some courses and experiences do not address the technological tools for teaching fully.	The TEP addresses most of the technological tools for teaching in a robust manner across multiple course contexts.	The TEP addresses each of the technological tools for teaching in depth across multiple courses contexts and experiences.

## GOAL TWO: PCK FOR CRITICAL IDEAS

The focus of the next level of assessment is the extent to which the program supports robust PCK development for each critical idea identified in goal 1. This analysis can be repeated for each of the critical ideas (disciplinary core ideas or math domains) identified in goal one. Analysis should focus on *what is emphasized* in regard to each component and *how* it is emphasized (e.g., readings, assignments, in-class experiences, etc.). Consideration should also be given to whether that critical idea is explicitly or implicitly addressed. This purpose of this analysis is to help TEP programs identify missed opportunities to support the development of teacher candidates' PCK knowledge and PCK skills (in practice).

Table 2. Inventory of PCK emphasis for critical ideas

	Opportunities for developing <i>knowledge</i> , and specific knowledge outcomes				Developing <i>Skills</i>
Matter and Energy in Systems	Knowledge of Curriculum	Knowledge of Instructional Strategies	Knowledge of Learners	Knowledge of Assessment	PCK in practice

Course or experience #1: example: 490	<i>Examine BPS kits/NGSS -understand vertical alignment of topics &amp; goals for teaching energy</i>	<i>Engage in model lesson about the practice of modeling energy transfer</i>	<i>Common student misconceptions about energy</i>	<i>Summative assessment examples given</i>	<i>490 - implement energy curriculum (some students)</i>
Course or experience #2-20x					
Course or experience #3					

**Questions for Consideration:**

- To what extent do students’ experiences across their coursework provide opportunities to develop PCK for the critical ideas?
- What elements of PCK are not addressed that should be? Through what courses/experiences?
- How is Technological Pedagogical Content Knowledge (TPCK or TPACK) embedded in the TEP?
- How does the TEP integrate cultural responsiveness (as consistent with [Framework for K-12 Science Education](#) and [NCTM Equity Principle](#)) in the knowledge of learners?

<b>Scoring Rubric for Goal 2:</b>	<b>Beginning</b>	<b>Developing</b>	<b>Integrating</b>
The TEP provides candidates opportunities to develop the knowledge bases of PCK for teaching the critical ideas.	The TEP addresses some component knowledge bases of PCK for the critical ideas. Some courses and experiences do not address PCK fully.	The TEP addresses most of the components of PCK across multiple course contexts. Some opportunities for enactment (PCK skill) are included.	The TEP addresses each of the component knowledge bases of PCK and the development of PCK skill in depth across multiple courses contexts and experiences.
The TEP provides candidates opportunities to develop the knowledge bases of TPCK or TPACK for teaching the critical ideas.	The TEP addresses some component knowledge bases of PCK for the critical ideas. Some courses and experiences do not address PCK fully. ---	--	--	---

### GOAL 3: CANDIDATES ENACTING PCK

The final goal of analysis focuses on teacher candidates enacting specific PCK strategies into their practice. University faculty and field supervisors in TEP reflect upon and refine their teacher candidates' level of enactment of PCK.

#### Questions for consideration:

- What evidence is there of teacher candidates using [tasks of teaching](#) in their practice?
- What reflection opportunities are teacher candidates given to enact on their development of PCK?
- How are the various components of PCK reflected to inform instruction?

Table 3. Inventory of PCK Enactment

	Method- What opportunities are university faculty providing the teacher candidates to enact on these?	Frequency- How many times they enact this for one critical idea?	Frequency- For how many different critical ideas is this enacted?	Depth- How has this become a habit of mind?	Opportunities for Reflection- How candidates use PCK to inform planning, teaching and assessment?
How are teacher candidates embedding knowledge of curriculum in their practice?					
How are teacher candidates embedding knowledge of instructional strategies in their practice?					
How are teacher candidates embedding knowledge of learners in their practice?					
How are teacher candidates embedding knowledge of					

assessment in their practice?					
How are teacher candidates embedding use of technology in instruction?					

## PROGRAM REFLECTION

STEM and TEP faculty complete this analysis to reflect upon and refine their approaches by considering the extent to which the experiences deepens candidates' subject matter knowledge, makes key aspects of teaching visible to candidates, engages candidates in enacting their PCK, and supports candidates in developing tools and dispositions to continue their PCK development beyond their TEP program. (Each of these criteria are elaborated upon below)

- **Develop subject matter knowledge for teaching** – This refers to the extent to which an experience helps prospective teachers deepen their understanding core ideas in the STEM disciplines and how those ideas connect to one another. This includes understanding how different concepts build on one another, what makes some concepts difficult for learners to understand, and how those ideas can be represented.
- **Make key aspects of teaching visible to prospective teachers (representation and decomposition of practice)** – This refers to the extent to which an experience helps makes visible key aspects of teacher decision-making and professional reasoning, and engages prospective teachers in unpacking the complexity of teaching practice and the interplay with the teaching context.
- **Engage prospective teachers in authentic tasks and experiences (approximation of practice)** – This refers to the extent to which an assignment helps prospective teachers engage in authentic activity; that is, activity that is congruent with the work of teaching and that allows prospective teachers to experiment with new skills, roles and ways of thinking with more support. This also refers to the extent to which the activity requires novices to make their thinking and decision-making visible by requiring more detailed information than may be typical in the everyday work of teaching.
- **Develop the tools and dispositions to learn from their practice** – This refers to the extent to which an assignment helps prospective teachers reflect upon and learn from their practice (next steps) based upon analysis of evidence.

	Not supported	Limited support	Adequate support	Exemplary support
<b>Deepen subject matter knowledge for teaching</b> <ul style="list-style-type: none"> <li>● Anticipating student thinking around specific science ideas</li> </ul>				

<ul style="list-style-type: none"> <li>● <b>Designing, selecting, and sequencing learning experiences and activities</b></li> <li>● <b>Monitoring, interpreting, and acting on student thinking</b></li> <li>● <b>Scaffolding meaningful engagement in a science learning community</b></li> <li>● <b>Explaining and using examples, models, representations, and arguments to support students' scientific understanding</b></li> <li>● <b>Using experiments to construct, test, and apply concepts</b></li> </ul>				
<p><b>Make key aspects of teaching visible: knowledge of curriculum</b></p>				
<p><b>Make key aspects of teaching visible PCK: knowledge of learners</b></p>				
<p><b>Engage in approximations of practice/enactment of PCK</b></p>				

<b>Develop the tools and dispositions to develop PCK further</b>
