

Graded Pass/Fail, and due Friday, Dec. 15 by 4PM.

Instructions:

A. Make a "cross-plot" showing interconnections between humans and the biology, chemistry, geology, and physics of the ocean. Supply one connection for each ocean domain (example: Humans and Chemistry), for a total of four connections. Alongside each arrow specify a process, and above or below each domain, specify an effect.

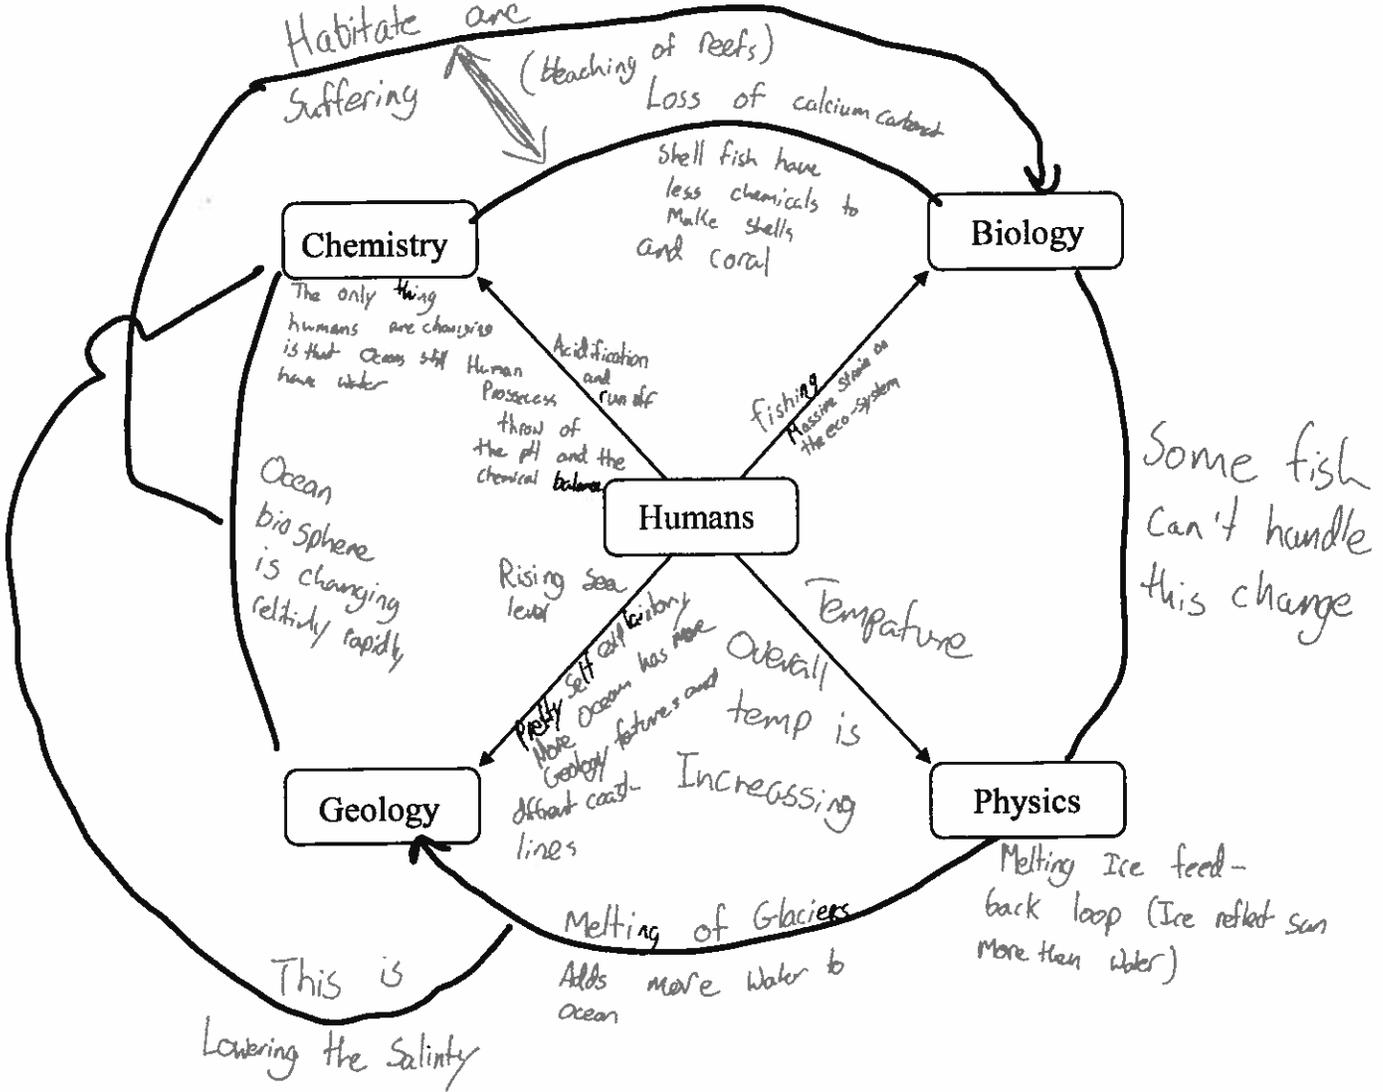

B. Wherever possible, expand your diagram to include relationships between the examples in the various domains, by connecting Chemistry with Biology, Biology with Physics, Physics with Geology, and Geology with Chemistry.
